

Crushing crumbs of information to eat a whole cake.

Felipe Pr0teus

Who am I?

- Felipe Espósito (Pr0teus).
- 10+ years of experience.
- Father of a girl.
- Bug bounty when the above item allows.
- Blue team instructor when the above item allows as well.
- Security Researcher at Tenchi Security

Motivation

We as a society rely in each other, not only governments but services. That's create a huge supply chain of trust?! and relationships.

Electricity company has to know: Your name, where you live, how much you spend in energy, if you are paying...

Police find marijuana plantation in Santo Antônio de Pádua

The same can occur in a lot of other services that we use...
Internet Provider, Water, Gas,

A marijuana plantation was found inside a residence in the Gabri neighborhood late Tuesday morning in Santo Antônio de Pádua.

How can we exploit this relationships?

 Hack every single company. (Hack the planet!)

 Wait for the company be hacked and get the leak (boring!)

Then i start to wonder:
What is the minimum crumb of information do i need to get access to anyone electricity bill for example ?

CPF

Its similar the Social Security Number in United States of America.

Every single brazilian has (at least) one.

That makes a **awesome** Primary Key in databases.

Every single piece of information, is a good intel

esqueci minha senha.

PIX

Its an instant payment system created in Brazil. Currently the main form of payment, like nobody carry cash anymore. You can have 4 PIX keys:

- Cellphone (98,7KK)
- CPF (107,8KK)
- E-MAIL (68,8KK)
- RandomKey (QRcode)

469 kk active Pix keys: Data from july 2022

ROSSEGUIR

Not only websites:

Sometimes we have to look further

There are side effects? sometimes!

Some services will send an email to the target.

Letting him know that he is being targeted by someone.

The main problem:

If i only know the just one piece of information about the target, how do i pivot and found other pieces to get the whole cake?

Generated by midjourney

Catalog all the info:

Designed YAML files:

- Easy to write/read & parse.
- AND & OR relationship between input data

```

Parse all the information and graph it.

Because everybody loves graphs right?

Demo time

Future Work

- Uniform the input fields and output fields (avoid confusion), with regex!
- Add more sources! Contribute to the project!
- Add some kind of filters for context.
 - Ex: if the CPF is from SP only look for datasources in SP.
- Add Browsing Automation

Conclusion

- User interface and User Experience must take security into account.
- There isn't some sort of norm or regulation on this, so till there you have room to exploit.
- The same can be applicable to several countries and different contexts. Go for it!

THAT'S *LL FOLKS! Thanks!

- Any Questions ?!
- Special Thanks for:
 - Corvolino
 - o Thiago Bordini
 - Alexandre Sieira
 - Rodrigo Montoro
